איך שואלים את התמרים, כמה מים הם רוצים?
דניאל כץ

About SupPlant

- Israeli startup
- 8 years- 14 countries
- 33 crops

Our Product

- Plant sensors
- Soil sensors
- Meteorological stations
- Meteorological forecast
- Cloud based Algorithm system
- Plant and fruit growth optimization and decision support tools.

GBI 2018

GROWTH-BASED IRRIGATION (GBI™)

THE AUTONOMOUS VEHICLE OF IRRIGATION

The first autonomous irrigation system, irrigating autonomously, based on real time plant behaviour and necessities.

Success stories Using SupPlant technology

40%-60% higher Yields (Lemons)

38% water savings (Apples)

21% higher Yields (Macadamia)

Reduce Berry cracking (Grapes)

What about dates?

Blade leaf and fruit sensors

Case Study

**Kibbutz Shluhut
Majhul – Israel –
2019-2021**

**2019 first results
(April to August)**

Treatment	Water, m3/dun	Yield, ton/dun	Fruit Quality
GBI	435	1.514	Good
Control	768	1.555	Good
Save water, %	43	-2.6	

Case Study

Kibbutz Shluhut // Majhul – Israel – 2019-2021

Water Saving

By following the tree's growth and irrigating according to the tree's exact needs all along the season, SupPlant's algorithm-based autonomous irrigation system showed an average of 46% water saving 3 years in a row

Water usage - SupPlant vs Control

Case Study

Kibbutz Shluhut // Majhul – Israel – 2019-2021

Stable Yields

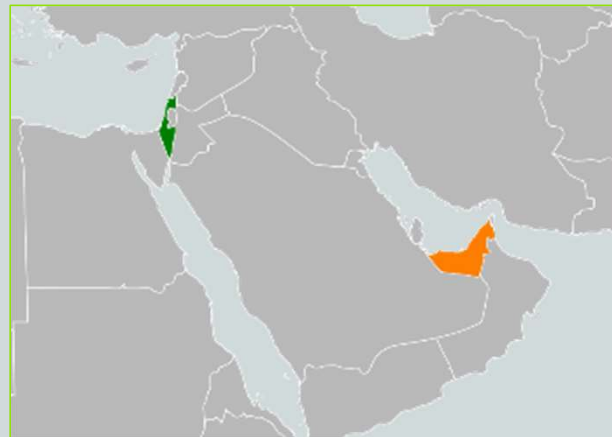

The 3-year average yield in SupPlant's algorithm-based autonomous irrigation system plot was higher than the control. We made sure that correct irrigation management can maintain and even improve production levels with far less water than used according to current knowledge and practices

Yield over 3 years - SupPlant vs Control

Case Study

UAE

Plant growth

30%- 40% water saving

Vision & Milestones

The Plan Objectives:

Save water
up to 40%

Maintain
growth of
the plant

Increase
yield by up to
25%

Prevent plant
stress

Reduce fruit
loss

Overcome sever
weather
conditions

Case Study

UAE // 2021-2022

Water Saving

By following the tree's growth and irrigating according to the tree's exact needs all along the season, SupPlant's algorithm-based autonomous irrigation system showed an 30% water saving in the first year of operation!

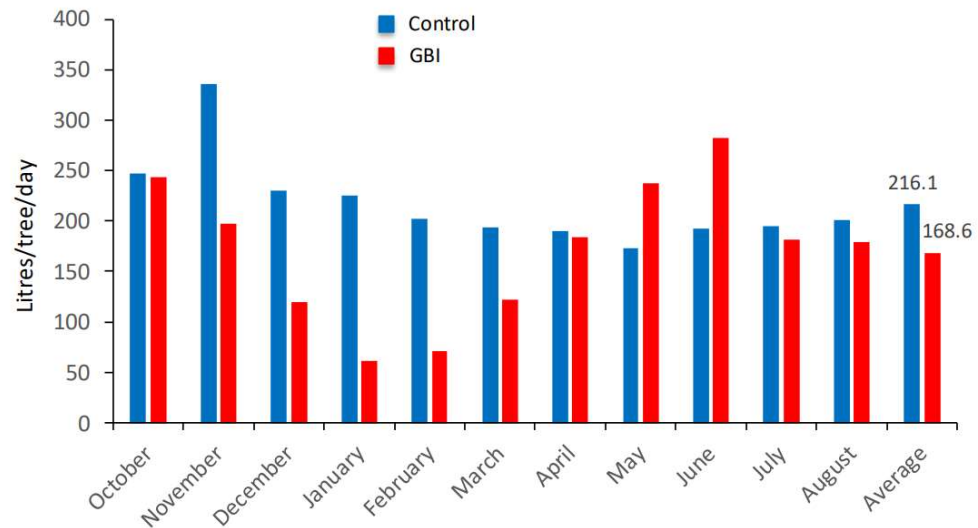

Fig. 1. Water application per tree per day in the control and "Supplant GBI" treatment during the first year of the experiment (season 2021/22). Each column represents an average of 24 trees per treatment.

Case Study

UAE // 2021-2022

Water Saving

By following the tree's growth and irrigating according to the tree's exact needs all along the season, SupPlant's algorithm-based autonomous irrigation system showed a 30% water saving in the first year of operation!

Fig. 2. Water use ratio (litres/day/plant) between GBI and control (GBI/Control), for the first year of the experiment (season 2021/22). Negative numbers represent the amount of water (in percentage) saved by the "Supplant GBI" system during the first season.

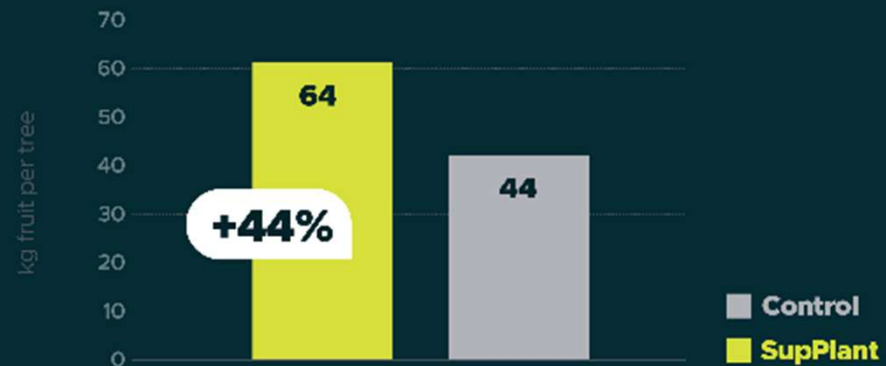

Case Study

UAE // 2021-2022

Yield increase

By following the tree's growth and irrigating according to the tree's exact needs all along the season, SupPlant's algorithm-based autonomous irrigation system showed an average of 46% water saving 3 years in a row

Fruit Yield per Tree

Irrigation power

UAE // 2021-2022

Water use efficiency

When the water use efficiency (WUE) was compared between the treatments (Kg of fruit per m³ of water, per tree), the GBI treatment increased the WUE by 86% (more yield with less water).

Fig. 7. Comparison between Control and “Supplant GBI” treatments in water use efficiency (Kg of fruit per m³ of water per tree) for the first year of the experiment (season 2021/22). Each column represents an average of 24 trees.
